FLORENCE, SATURDAY, DEC. 17, 1881.

We surrender our editorial space, this issue, to matters of local interest. Home news is the important feature of a country weekly.

It is to be hoped that the present congress will make some provision for the veterans of the Mexican war. There are numbers of these veterans on the Pacific coast who are enfeebled by age to such a degree that they are incapable of earning a living by manual effort and yet possess no other means of support. Many of these were engaged in lucrative business when the call for volunteers was issued, but feeling that their individual interests were secondary to those of their country, they sacrificed them on the altar of patriotism and liberty. They passed through the war, receiving, as a compensation for risking their lives and enduring all manner of hardship, the pitiful stipend of eight dollars per month. At the close of the campaign they returned home to find themselves impoverished in purse and compelled to begin anew the struggle for financial independence with the best days of their manhood spent. A few of the more fortunate ones have succeeded in regaining their lost vantage ground, while the greater number have been gradually reduced to helpless poverty. Repeated efforts have been made to induce congressional recognition of their services and needs, but so far the national assembly has treated the subject with almost stolid indifference. If congress would only force a reform in the pension office they could save enough from the munificent sum paid out to fraudulent pensioners to comfortably maintain the Mexican veterans.

MINERAL HILL NOTES.

A Strike in the Wedge.

Just as we were going to press a note reached us from Mineral Hill, saying that a rich strike of horn silver was made yesterday in the Wedge mine. This is one of the Cholla group, owned by Messrs. Miller and Sibbald. The ledge is about fifteen feet wide and carries horn silver nearly all the way across. Count one more for Mineral Hill.

The purpose of Wm. P. Miller's visit to this district last week was to make a thorough, personal examination of the Alice mine and make a careful assay test of the different characters of ore found in the mine. He made a large number of assays, and the lowest return obtained was \$25 to the ton, while the highest ranged into the thousands. Mr. C. L. Wilson, Jr., of San Francisco, was present and assisted in making the assays, and was so well satisfied with the fairness and correctness of the test that he subscribed for ten thousand shares of the Alice stock, to be taken as soon as the mine can be incorporated and the stock issued. In course of a conversation with Mr. Wilson on this subject, he assured us that during a protracted stay in the famous Wood River district, Idaho, he did not see in all the claims combined as much ore in sight as is visible in the groupings and workings of the Alice, and he is not an enthusiast, but a man of cool, clear judgment. The ten tons of ore shipped to Melrose was a fair average of the dump, as it was taken from a cut made straight through the center of the ore pile and was not assorted. The return from this shipment may be justly and safely considered a fair average of the mine. The result of the reduction has not been reported yet, but we are satisfied that it will surprise the doubting Thomases of San Francisco, who have credited the misrepresentations of enemies of the Mineral Hill district. The bond would have expired on the 1st of January, but while here Mr. Miller obtained a sixty days' extension, for the purpose of enabling him to perfect arrangements for lifting the bond and incorporating the property. About 30,000 shares of the stock have been authorized for here, by men who have seen and examined the property, and more will be taken as soon as the stock is placed in the market. It is expected that a contract will be let soon for sinking a five hundred foot, two-compartment, vertical working shaft.

A VERY RICH STRIKE

Was made this week in the groupings of the Specie Paying, the property of the Indiana company. An open cross-cut was made on the surface of the ledge and passed through a streak of ore, about five feet in width and literally peppered with horn silver. Mr. P. A. Brown, the company's superintendent, has gone east for the purpose of holding a consultation with the directors and stockholders on the subject of development work, and if his mission was successful, \$20,000 will be expended in opening up the mine and placing it in proper condition to make the extraction of ore easy and regular. As soon as this work shall have been accomplished, the main shaft will be erected. A third shaft is in prospect.

THE RIALTO

Which is the first south extension of the Specie Paying, was sold on Tuesday, to Mr. Thos. B. Fish and Messrs. Brown and Jones, making these gentlemen the sole owners of the property. The sale was made by Mr. Peschody on a power of attorney from Mr. Watson. The Rialto ranks with the best properties of the district, being on the Alice ledge and only one claim south of the latter. Steps have been taken to place it east, and whoever buys it, will be satisfied with the investment as soon as development work commences.

THE CHOLLA
Continues to show more and better ore as the work of development progresses. A small vein of black metal, which the workmen had considered worthless, was tested a few days since, and to the surprise of every one proved to be remarkably rich in silver. It is now believed to be a species of black sulphurets. The body of galena in the fifty-foot level has not been cut through yet, and is solid in the breast of the level. Those who have inspected the property recently, are enthusiastic over its showing. The assessment work on

THE COCKTAIL
For this year has just been completed and shows a four-foot ledge of good mineral. Mr. W. D. Johnson is the owner. Work is progressing on the

THE GRAY EAGLE
A new shaft has been started, and at a depth of fourteen feet shows some excellent mineral, some of which assayed as high as \$800. The ledge is 54 feet between the walls and carries mineral nearly all the way across. This claim is the first south extension of the Nelson and is owned by W. D. Johnson, N. B. Witt, Mrs. Wm. Hyde and John A. Lewis.

THE GRAY WOLF
Shows a very large ledge. It is eighteen feet across the surface of the ledge proper and at the point where the workings are located large feeders come in and form a junction with the main ledge, making an immense chimney of ore, in which there is a vein of pay-roll fourteen feet wide, eight feet of which carries galena in masses. This is opened up by a thirty-foot tunnel, and the workmen are now building a station at the breast of the tunnel, preparatory to sinking a winze fifty feet vertically. At the bottom of this winze a cross-cut will be made to determine the width of the ledge at that depth. The surface rock has been literally charred by the action of volcanic heat, but in the tunnel which cuts the ledge some distance below the surface, the formation is more solid and shows gradual solidification as depth is attained. The claim is convenient to water, and a good natural road leads from the dump to Florence. L. L. Remy is the owner of the claim, having bought out his partner before the development work commenced. We believe this will prove to be one of the best properties in the district and congratulate Louie upon having acquired the sole ownership of it.

The New Jail.

Following are the specifications for the new jail to be erected at Florence. These are the specifications furnished by P. J. Pauly & Bro., of St. Louis, whose bid was accepted by the board of supervisors.

PLATE WORK.
Each cell to be six feet six inches wide, eleven feet deep from front to rear, and seven feet high. The corridor to be four feet wide, thirteen feet long and seven feet high. The floors and ceilings of cells and corridor, and the outside partition walls of cells, and the rear end of corridor, where the lever box is attached, to be made of 3-16 inch thick plate. All the joints to butt and be strapped with a 4 by 5 inch steel strap. All the inside corners to be put together with 2 by 2 by 4 inch angle iron, and all the outside corners to have double angle iron, to be 2 1/2 by 2 1/2 by 4 inches, and 3 by 4 inches. Are to be riveted with 1/2 inch counter-sunk, oval-head rivets, and counter-sunk rivets on the inside. Rivets to be spaced from 2 to 3 inches from centers. Except where steel bars run between, they are to be riveted with 1/2 inch rivets to the plate and double angle iron.

LATHING.

All exterior plate iron of cells and corridor to be lathed with patent hardened steel bars, hardened on the edges and annealed in the center. Bars to be 2 by 3 inches, placed 5 to 6 inches apart, and the end of bars secured between double angle iron, where placed on exterior sheets. Bars are to be riveted every six inches apart, with 1/2 counter-sunk, oval-head rivets to the plate. All plate iron so lathed will also have on the inside at top and bottom a 2 by 3 inches hardened steel bar and one 4 by 5 inches in center, crossing the exterior bars.

STEEL LATTICE WORK.

At the rear of each cell there will be a lattice section (or window) 2 feet wide, extending from floor to ceiling to admit air and light—made of the patent hardened steel bars 2 by 3 inches, growing at right angles and to be riveted at every intersection with 1/2 inch counter-sunk, oval-head rivets, counter-sunk rivets on the inside. Meshes to be 2 1/2 by 2 1/2 inches. Said steel lattice section to be riveted at the inside and outside angle iron and to be securely riveted to the plate on the sides.

CELL DOORS.

Each cell is to have a door two feet wide and six feet high, made of same kind of material and constructed in same manner as the rear sections herein before described, and at the bottom there will be a feed opening 4 1/2 by 6 inches. Each door will be hung on a pair of double strap hinges, protected by hardened steel bars, and opposite each hinge on the door will be a hardened steel rabbit catch, which will shut into a mortise in the angle iron frame. In the center, across each door, will be a 4 by 5 inch patent hardened steel latch bar, riveted to the door with a double row of rivets. Each door opening will be provided with a 2 by 2 by 1/2 inch angle iron frame, securely riveted to the plate on the inside, and forming a rabbit for the door to shut against.

CORRIDOR GRATING.

The entire front and the entrance end (with the exception of eight inches where over box is attached) will be made of the patent hardened steel bars 2 by 3 inches, crossing at right angles, and to be riveted at each intersection with 1/2 inch counter-sunk, oval-head rivets, counter-sunk rivets on the inside; meshes to be from 2 1/2 to 3 inches square. This lattice work is to be secured at the top and bottom and at all the upright corners, with double angle iron, and riveted with 1/2 inch rivets (as above described) passing through both thicknesses of the angle iron with the steel bars between them. The inside an-

gle iron to be 2 by 2 1/2 inches, the outside 2 1/2 by 2 1/2 by 5-16 inches. The several sections of the steel lattice work of the corridor are connected at the joints by placing a 4 by 5 inch patent hardened steel bar on one side, and a 4 by 5 inch iron bar on the opposite side, riveted through both bars with the ends of the lattice bars between them, with a double row of 1/2 inch rivets, in same manner as heretofore described.

CORRIDOR DOOR.

The entrance door to the corridor will be made of steel lattice work, same kind of material and in same manner as the corridor lattice work above described, and will be 2 feet 6 inches wide and 7 feet high. Each side of the door will be stiffened by an angle iron bar, 2 by 2 by 1/2 inch, riveted to the door on the inside. The door will be hung in the same manner as the cell doors above described. On the outside of the door there will be a 3-16 inch thick iron plate about 15 by 20 inches, securely riveted to the door, on which will be riveted a heavy slide bolt made of hardened steel and iron combined. Said bolt slides into the lever box (described below) and is secured there by a heavy padlock. Another slide bolt will be secured to the front of the cell plate. This bolt slides over the edge of the door and securely fastens it at the bottom. This latter bolt is locked with a heavy padlock on the cell side, and out of reach from the inside.

LOCKING ARRANGEMENTS.

Each cell will be to be locked by means of P. J. Pauly's patent lever lock, which locks the door at the top and bottom with heavy bolts. The lever controlling this lock is locked into an iron box made of 3-16 inch thick jail plate, secured to the plate on the front and of the corridor, adjoining the entrance door. The door to this lever box is to be secured with a five tumbler-wrought iron lock, with a combination to close the keyhole with a plate. In addition to the above lock, all doors will be provided with a heavy jail padlock, placed on the steel latch bar across the center.

RUNGS.

Each cell will be provided with six sets of angle iron, to swing hammocks from. Hammocks to be 28 inches wide, made of No. 4 ducking, with 1/2 inch cord sewed into edges all around, and swung from side to side of cell. At each end there will be three heavy 1/2 inch leather straps and buckles to fasten the hammocks to the angle iron loops, which are riveted to the sides of the cells.

FOUR AIR DUCTS.

In the corner of each cell there will be a four air duct, made of No. 14 plate iron and riveted to butt plate. They will have two shutters; the one at the bottom large enough to receive a night bucket, and the one at the top large enough for draft. The duct is connected with a 6 inch iron pipe on top of the cells, extending through the ceilings overhead or into a flue. The specifications also include a water closet, a sink for washing purposes, tank, etc. The material is to be of the best quality and every thing is to be furnished and put up in accordance with the above specifications for \$4,800. The building outside of the above will cost not to exceed \$1,200. This we will secure for a total cost of \$6,000, the best jail in the Territory. The lowest bid on the wooden jail, planned by Mr. Adams, was nearly seven thousand dollars. We commend the wisdom of the board in selecting the iron jail, as it is not only cheaper, but is in every respect superior to a wooden structure.

Owl Heads Mining District.

December 24, 1881.

ED. ENTERPRISE: I arrived here December 1st from the beautiful valley of the Gila; saw nothing very interesting until I got in sight of the Owl Heads' four nobles, which loom up from the plains on the west side of the district—from which it takes its name—as mute sentinels, guarding the rich deposits of shining silver ore which cross the ground in the vicinity and lie to the east of the nobles. I arrived at the office of the Jesse Benton Mining Company just as the bell sounded for dinner, and was welcomed by our mutual friend, W. H. Merritt, the superintendent of the company. After refreshing myself with a good and substantial dinner of roast venison, etc., which was quite a treat, I accompanied Mr. Merritt to the different workings on the mine. I will give you a description of what I saw, commencing from the west end of the mine. Here they have a cut running east 125 feet to a shaft 30 feet deep, from which they are now taking out very high grade ore. The drift running west to the shaft is all in very good ore, which gives an average assay of \$340 per ton. Shaft No. 2 is 400 feet from the west end, and is down 24 feet in splendid ore. Shaft No. 3 is on the center of the claim and is down 54 feet. The ore that this shaft is now producing will average \$425 per ton in silver and \$5 in gold, and shows a vein of 20 inches. Shaft No. 4 is 100 feet from No. 3 to the east, and is in excellent ore, showing very rich chlorides and carbonates. The next and last shaft is on the extreme east end of the claim, on which the company have erected hoisting works. The shaft is down 70 feet in the richest kind of ore, both chlorides and carbonates. The company have on their ore dumps about 30 tons of ore that will average \$375 per ton in silver. A vast amount of development has been done on this mine, and work is still progressing and will continue right along, and it is one of the most promising properties in the county at present. The company have at present nine men employed. On the east end and where the hoisting works are erected, they will commence a drift when they reach the depth of 100 feet. They are going to erect a new office with an assay department attached, and other buildings for the employees. There are three thousand adobes already made, and will commence building in a few days. The fact is the company are rapidly getting the mine and other work in first-class shape, and mean to have a permanent and substantial concern. Under the present management and working the mine is able to put out a large amount of high-

grade ore every month. The actual average of the ore is no guess-work, but is taken from the returns of the several carloads shipped to San Francisco and there worked. The returns are all in the office of the company, which speak well for the mine. The company do not wish to ship any more ore, but are going to erect a mill. They are selling part of the stock at present for that purpose. I understand that they have already disposed of about 5,000 shares. It is one of the best investments that I know of at present, in the Territory, and your humble servant went right down to the bottom of his pocket and purchased a nice slice, and I would advise every one, before it goes out of their reach, to supply themselves with some of the stock, because, in as short time the company will be paying dividends. I saw some of the Benton ore in the office of the company that assayed \$1,100, and they have considerable of such ore. Get a horse and put your blanket behind you, as I did, and come out and see this camp and Jesse Benton and other claims. You will fall right in love with Jesse, for she is a peach. I will take a look at the other mines before I leave camp; so you will hear from me again. Sin.

Mexican Mines and Mining Laws.

To do this subject justice it would require an abler pen than mine. Nevertheless, I can set forth information that will be of use to persons going into Mexico to look after mining property.

To locate a mining claim in Mexico, you can first notify the proper authority by word of mouth, which proceeding is good for ten days. This does not cost anything and gives you time to look over your ground. Then if you think it worth prospecting, the next proceeding is to make out a written statement describing the location and the names of the partners, if any, and the shares each one owns in the claim (all mines in Mexico are divided into twenty-four shares). If the location is in virgin ground, you are then allowed ninety days in which you must sink or tunnel a work of thirty feet deep. Yet in case you have not been able to complete such work in the time specified, you can again make application to the proper authority for an extension of time, setting forth that owing to the scarcity of mining operatives, provisions in the district, or the hardness of the rock, or other difficulties in the ground, that you have been unable to comply with the law. The authority, on examination of the ground and finding your excuse valid, can grant you the time necessary and no more to finish the work. Then you have to make an application in writing to get possession of the property. The mining engineer of the district calls on all the mine owners in your neighborhood to be present on a day appointed, on which day in presence of all parties assembled, he measures off the ground to which you are entitled, all which proceeding he takes down in writing and together with the first papers of the recording and application for possession, constitute what is called the title to the property, which document remains on file and you get an attestation copy, which is what you have to show as your title. The amount of ground you get varies a little. If a single individual makes the location, he gets 600 meters in length, the width varying from 100 to 200. If a vein is perpendicular, or nearly so, you only get 100, and as the inclination increases, you are allowed more, until at an angle of forty-five degrees you get 200 meters which is the utmost; nor are you allowed anything outside your superficial lines. If at a depth your vein should pass your side lines, it would then cease to be your property. If the owners are two or more, they are entitled to be considered as a company, in which case, if in a new camp, they are entitled to 800 meters as a company, and 600 more for the merit of being discoverers; also, if two or more persons take up an old mine, which has been abandoned, they are entitled to the same privileges as discoverers, in being restorers of an ancient work. In case you take up an old mine, you are only allowed sixty days to complete the work of thirty feet, as in that case you would only have to clean out some of the shaft and put it in order to receive possession. This, Mr. Editor, is merely an introduction to the subject, and if you consider it worthy of publication, I can give you much more on the same subject. Respectfully Yours, WILLIAM JENNINGS.

Sheriff's Sale.

By virtue of an execution issued out of Justice W. H. Benson's court, of Gila township, county of Pinal, Territory of Arizona, dated the 7th day of November, 1881, in a certain action wherein Peter Palmer as plaintiff recovered judgment against the Pinal Copper Company for \$108.61 and costs of suit taxed at \$79.42 on the 7th day of November, 1881. I have levied upon the following described property, to-wit: Mining claims situated in Mineral Hill district, county of Pinal, Territory of Arizona, named as follows: Millie, Esmeralda, Burnside, Reed, Monroe, St. Julien, Tibbatts, Bulk, Ida Bell, Scorpion, National and Ray. Also the boarding house at Bolingerville, smelter, store and other buildings at Bolingerville, and quantity of ore near the said smelter.

Notice.

Notice is hereby given, warning all persons to beware purchasing the following mining properties situated in Mineral Hill district, viz: Good Truck, Extensive, Harry and West end, said property having been impeded and relocated under the names of Black Jack, Chicago, Tully, and Glencoe, as we are the rightful owners thereof, and have performed the regular assessment work for the year ending December 31st, 1881. D. W. McALLAN, R. B. MACKENZIE, R. B. BOWEN, HARRY JONES.

Ranch For Sale.

THE SUPERVISORS.

Official Report of their Proceedings.

MONDAY MORNING, Dec. 12th, 1881.
Board met pursuant to adjournment. Present, Pat Holland, chairman, and John T. Bartleson.
Minutes of previous meeting read and approved.
Mr. H. L. Smith tendered his resignation, in writing, as clerk of the board, which upon motion was accepted; ayes, Chairman and Bartleson.

On motion Hinson Thomas was appointed clerk of the board of supervisors, of Pinal County, and having furnished the necessary bond and qualified, entered upon the discharge of the duties of the office.
Proposal of W. C. O'Boyle to build a culvert across the public road at Silver King was further laid over to next regular meeting.

All accounts and bills laid over from previous meeting and presented at this meeting, were laid over till next regular meeting.
The report of the committee appointed to review the proposed road from Pinal to Riverside was accepted and committee discharged. Upon motion the clerk was directed to advertise for sealed proposals to build a wagon road over route proposed. Said road to be so built that a six-mile team can easily and safely haul six thousand pounds of freight at load over said road. The grade not to exceed 20 feet in each 100 feet on any portion of said road, and the road to be not less than 12 feet wide at any point; ayes, Chairman and Bartleson.

The report of the committee appointed to review a route for a proposed road from Florence via Round Valley, to intersect the road of the Pinal Consolidated Mining Company on the Gila river was read, accepted and committee discharged. Upon motion the clerk was instructed to advertise for sealed proposals to build a wagon road over the route proposed. Said road to be so built that a 15-mile team can easily and safely haul 18,000 pounds of freight at one load over said road. The grade at no position of the road to be not more than 20 feet to each 100 feet and the road to be not less than 12 feet in width at any point.

The petition of A. J. Doran and others was read, asking that Allen Whitlow be appointed roadmaster of Pinal road district. Upon motion Mr. Whitlow was appointed said roadmaster and the clerk instructed to notify him of said appointment and to supply him the necessary road-tax receipts.

A communication from J. D. Reymert was read, forwarding bond for faithful execution of contract to do the county printing. Bond read and upon motion was accepted; ayes, Chairman and Bartleson.
Board adjourned to meet Dec. 19th, at 10 o'clock, a. m.
PAT HOLLAND, Chair.
HINSON THOMAS, Clerk.

New Stage Line to Mineral Hill.

On Saturday, November 6th, the undersigned will commence to run a semi-weekly stage line between Florence and Mineral Hill. The stage will leave Florence at 7:30 a. m. Wednesday and Saturday mornings of each week, and will return the same day, leaving Mineral Hill at 2 p. m. Fare \$4; freight one cent per pound; mail matter carried free. Office at Florence, Corral.
